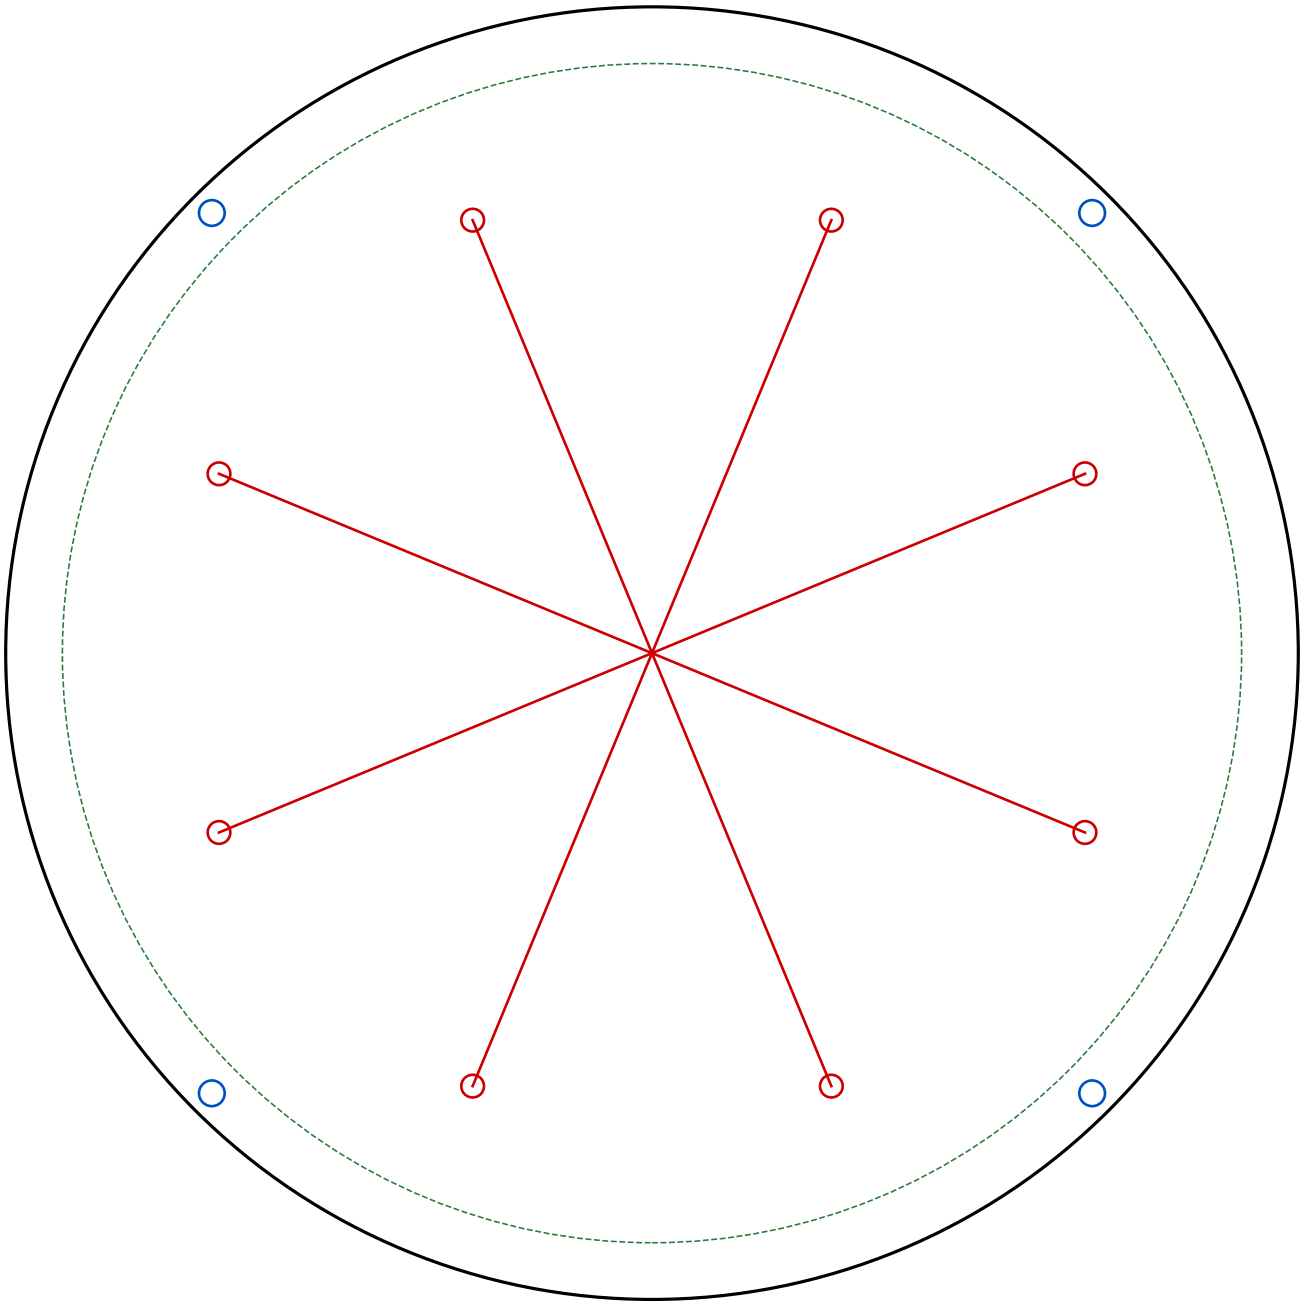
HAND-SIDE COVER: cutting template (print at 100 %, actual size)

Tape it to the frosted polypropylene divider (0.3-0.5 mm). Cut the black circle (171 mm).

RED: punch the 8 small holes first (3 mm: hole punch or hot nail), then cut the 8 lines from the centre to them.

BLUE: the 4 clamp-ring screw holes (3.4 mm). Green dashed: the part that shows inside the bell's lip.

Don't cut past the red holes: the uncut ring is what holds it in one piece and makes the flaps spring shut.



50 mm: check this with a ruler
